This booklet offers information about ABMS, the process for the board certification of physicians and for their continuous professional development through the ABMS Program for Maintenance of Certification (ABMS MOC®). It includes descriptions of each specialty and subspecialty where board certification is offered by an ABMS Member Board.

Visit www.CertificationMatters.org to check a physician’s board certification status and participation in an ABMS Member Board MOC program.
HIGHER STANDARDS.

BETTER CARE.

TRUSTED SOURCE.

ABMS’ role within the health care system is to be a leader, contributor, and influencer in quality improvement through the assessment and continuous professional development of physicians. We work with organizations across the continuum of medical education and practice, coordinating activities with existing initiatives such as meaningful use, performance improvement and patient safety, operational efficiency, commitment to care, and practice quality.

For more information about ABMS certification standards, activities, and programs, visit www.abms.org.

ABOUT ABMS

ABMS, in partnership with its 24 certifying Member Boards, serves the public and the medical profession by improving the quality of health care through setting professional and educational standards for medical specialty certification and practice.

Since its founding in 1933, ABMS has evolved these standards to support advancements in medicine, science, and technology, and changes in health care delivery processes. The standards and program guidelines set system-wide expectations and create consistency across the boards. Additionally, ABMS maintains a repository of certification information to verify certification.

The ABMS Member Boards were founded by their respective specialties to assess and certify physicians who demonstrate the clinical judgment, skills, and attitudes essential for the delivery of excellent patient care. Each board represents a distinct and well-defined field of medical practice that is based on major concepts in medical science and supported by distinct and accredited training programs. Each board sets the standards particular to its specialty, determines how performance against those standards will be assessed, and makes tools and services available to support medical specialists’ engagement in continuous professional development and performance improvement.

ABMS works with its Associate Members and other professional organizations and agencies, to elevate the standards for certification and to encourage participation in continuous professional development activities for enhancing the quality of care and improving the health of communities across the nation.

CHECKING PHYSICIAN QUALIFICATIONS

The ABMS physician certification database is the most widely respected and accepted resource to verify a physician’s certification. It includes information on board certification status and participation in the ABMS Program for Maintenance of Certification (ABMS MOC®). When selecting a physician, check his or her certification status online at CertificationMatters.org or by calling 1-866-ASK-ABMS.
ABMS works with its Member Boards and Associate Members to improve the quality of graduate medical education, the standards of medical practice, and the physician certification process.

**ABMS Member Boards**

Includes year approved as an ABMS Member Board

1933  Founding Member Boards
      American Board of Dermatology
      American Board of Obstetrics and Gynecology
      American Board of Ophthalmology
      American Board of Otolaryngology

1935  American Board of Orthopaedic Surgery
      American Board of Pediatrics
      American Board of Psychiatry and Neurology
      American Board of Radiology
      American Board of Urology

1936  American Board of Internal Medicine
      American Board of Pathology

1937  American Board of Surgery

1940  American Board of Neurological Surgery

1941  American Board of Anesthesiology
      American Board of Plastic Surgery

1947  American Board of Physical Medicine and Rehabilitation

1949  American Board of Colon and Rectal Surgery
      American Board of Preventive Medicine

1969  American Board of Family Medicine

1971  American Board of Allergy and Immunology
      American Board of Nuclear Medicine
      American Board of Thoracic Surgery

1979  American Board of Emergency Medicine

1991  American Board of Medical Genetics and Genomics

**Associate Members of ABMS**

Council of Medical Specialty Societies (CMSS) National membership organization providing an independent forum for discussion by medical specialists on issues of national interest and mutual concern, www.cmss.org.

Educational Commission for Foreign Medical Graduates (ECFMG) Organization that evaluates whether international medical graduates (IMGs) are ready to enter United States graduate medical programs, and offers a variety of other programs for IMGs and the entities worldwide that educate, train, register/license, and employ them, www.ecfmg.org.

Federation of State Medical Boards (FSMB) Policy-focused organization promoting best practices in medical regulation and encouraging uniformity in how states license and discipline physicians. It collaborates with NBME to provide the United States Medical Licensing Examination (USMLE), www.fsmb.org.

National Board of Medical Examiners (NBME) Assessment organization and co-sponsor of the USMLE which is accepted by medical licensing authorities as the standard by which to judge candidates for medical licensure, www.nbme.org.
OVERVIEW OF CERTIFICATION

The board certification program conducted by the ABMS boards is recognized by the health care industry as the highest standard for physician accountability. The Joint Commission, National Committee for Quality Assurance, health care institutions, insurers, physicians, and patients use ABMS Member Board certification status as an essential tool to assess a physician's qualifications. The basic process is described here.

Education Prior to Certification

- 4 years of premedical education
- Medical degree from a qualified medical school (MD, DO)
- 3 to 5 years of medical residency training in an ACGME accredited program

State Licensure

- Physicians meet requirements and pass an exam by the state(s) in which they wish to practice
- State medical license must be unrestricted and kept current throughout the physician's career

Initial Board Certification

- Occurs soon after residency training
- Requires passing an exam of medical knowledge, clinical knowledge, and diagnostic skills created and administered by an ABMS specialty board

Subspecialty Board Certification

- Requires initial certification from an ABMS board
- Involves additional training or completion of a fellowship program and passing an exam given by the board

Maintaining Certification

- Engages physicians in continuous, specialty-specific learning, assessment, and improvement activities.
- Reflects the competency framework of developmental outcomes (knowledge, skills, attitudes, and performance) and ABMS standards for certification

Board certified physicians complete specialty training beyond the state licensure requirements to practice medicine.
**Initial Certification**

The ABMS Member Boards’ certification programs are rooted in the professional and educational standards set by ABMS and the boards for medical specialty certification and practice. The program involves two basic phases of assessment within a continuous process: initial certification and maintaining certification. Initial certification occurs soon after completion of residency training. Each ABMS certifying board has identified what candidates must accomplish in order to be eligible for certification. This generally involves:

- finishing four years of premedical education in a college or university;
- earning a medical degree (MD, DO or other credential approved by the ABMS Member Board) from a qualified medical school;
- completing three to five years of full-time experience in a residency training program accredited by the Accreditation Council for Graduate Medical Education (ACGME); and
- obtaining an unrestricted medical license to practice medicine in the United States or Canada.

Candidates for certification must then pass an exam created and administered by their specialty’s board. These exams are developed by physicians and others who are subject experts in the specific area of medicine. Exams are developed against learning requirements, extensively tested, and refined over time. This is done to assure that the exam is a thorough, relevant, and fair assessment of a physician’s medical knowledge, clinical judgment, and diagnostic skills. Candidates who have passed the exam and completed all other requirements are considered certified as a specialist and a diplomate of their specialty board.

A similar process is followed for certified specialists seeking subspecialty certification. Candidates must be certified by their specialty board, complete additional training during or after residency, and successfully complete assessments of knowledge and clinical judgment in their subspecialty discipline.

**Maintaining Certification**

The ABMS Program for Maintenance of Certification (ABMS MOC®) provides physicians a mechanism to maintain their certification through engagement in continuous, specialty-specific learning, assessment, and improvement activities.

The activities in ABMS MOC are based on the competency framework, defined by ACGME and ABMS. They are aligned with the principles of the ABMS standards for certification and address performance expectations related to the various settings and challenges physicians encounter in practice.

Subject experts at the boards and related societies actively seek or develop tools and make available learning opportunities to support the MOC requirements. These can include clinical databases and registries, peer evaluations, and practice audits that gauge the physician, system, and patient relationship. Physicians complete the activities according to a schedule set by their specialty board.

**The Competency Framework**

**Professionalism**
Carrying out professional responsibilities safely and ethically.

**Patient care and procedural skills**
Providing compassionate, appropriate, and effective patient care.

**Medical knowledge**
Demonstrating medical knowledge and its application to patient care.

**Practice-based learning and improvement**
Continuously improving patient care through constant self-evaluation and lifelong learning.

**Interpersonal and communication skills**
Facilitating effective information exchange and collaboration with patients, their families, and health professionals.

**Systems-based practice**
Calling on other system resources to provide optimal health care.
This section provides a description of each specialty and subspecialty. It is organized alphabetically according to the broad areas of certification issued by an ABMS Member Board.

Allergy and Immunology

An Allergist-Immunologist diagnoses and manages disorders involving immune system conditions such as asthma, anaphylaxis, rhinitis, and eczema as well as adverse reactions to drugs, foods, and insect stings; also immune deficiency diseases and problems related to autoimmune disease, organ transplantation, or malignancies of the immune system.

No subspecialty certificates in Allergy and Immunology are offered. However, formal special pathways are available for physicians seeking dual certification in Allergy/Immunology and Pediatric Pulmonology; Allergy and Immunology and Pediatric Rheumatology; and Allergy and Immunology and Adult Rheumatology. Additional information is available from the board.

Specialty training required prior to certification: Prior certification in Internal Medicine or Pediatrics; two years in Allergy and Immunology.

Anesthesiology

An Anesthesiologist is a physician who provides anesthesia for patients undergoing surgical, obstetric, diagnostic or therapeutic procedures while monitoring the patient’s condition and supporting vital organ functions. The Anesthesiologist also diagnoses and treats acute, chronic and/or cancer pain as well as provide resuscitation and medical management for patients with critical illnesses and severe injuries.

Specialty training required prior to certification: Four years

Subspecialties

To become certified in a particular subspecialty, a physician must be board certified by the American Board of Anesthesiology and complete additional training as specified by the board.

Critical Care Medicine

An Anesthesiologist who specializes in Critical Care Medicine diagnoses and treats patients with critical illnesses or injuries, particularly trauma victims and patients with multiple organ dysfunction who require care over a period of hours, days, or weeks. These physicians also coordinate patient care among the primary physician, critical care staff, and other specialists and their primary base of operation is the intensive care unit (ICU) of a hospital.

Hospice and Palliative Medicine

An Anesthesiologist who specializes in Hospice and Palliative Medicine provides care to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to maximize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.
Pain Medicine

An Anesthesiologist who specializes in Pain Medicine provides care for patients with acute, chronic, and/or cancer pain in both inpatient and outpatient settings while coordinating patient care needs with other specialists.

Pediatric Anesthesiology

An Anesthesiologist who specializes in Pediatric Anesthesiology provides anesthesia for neonates, infants, children, and adolescents undergoing surgical, diagnostic, or therapeutic procedures as well as appropriate pre- and post-operative care, advanced life support, and acute pain management.

Sleep Medicine

An Anesthesiologist who specializes in Sleep Medicine has expertise in the diagnosis and management of clinical conditions that occur during sleep, that disturb sleep, or that are affected by disturbances in the wake-sleep cycle. This specialist is skilled in the analysis and interpretation of comprehensive polysomnography, and well versed in emerging research and management of a sleep laboratory.

American Board of Colon and Rectal Surgery

Approved as an ABMS Member Board in 1949

20600 Eureka Road, Suite 600
Taylor, MI 48180
(734) 282-9400
www.abcrs.org

Colon and Rectal Surgery

A Colon and Rectal Surgeon diagnoses and treats various diseases of the small intestine, colon, rectum, anal canal, and perianal area including the organs and tissues related with primary intestinal diseases (liver, urinary, and female reproductive system). They treat conditions such as hemorrhoids, fissures (painful tears in the anal lining), abscesses and fistulae (infections located around the anus and rectum). They also diagnose and treat problems of the intestine and colon such as cancer, polyps (precancerous growths), and inflammatory conditions.

Specialty training required prior to certification: Five years of General Surgery followed by one year in Colon and Rectal Surgery

American Board of Dermatology

Founding Member Board of ABMS

Henry Ford Health System
1 Ford Place
Detroit, MI 48202
(313) 874-1088
www.abderm.org

Dermatology

A Dermatologist is a physician with training and expertise in the diagnosis and medical/surgical management of diseases of the skin, hair and nails, and mucous membranes.

Specialty training required prior to certification: Four years

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Dermatology and complete additional training as specified by board.

Dermatopathology

A Dermatopathologist is expert in diagnosing and monitoring diseases of the skin, including infectious, immunologic, degenerative and neoplastic diseases. This entails the examination and interpretation of specially prepared tissue sections, cellular scrapings and smears of skin lesions by means of light microscopy, electron microscopy, and fluorescence microscopy.

Pediatric Dermatology

A Pediatric Dermatologist is a physician with training and expertise in the diagnosis and medical/surgical management of diseases of the skin, hair and nails, and mucous membranes of infants, children, and adolescents.
Emergency Medicine

A physician who specializes in Emergency Medicine focuses on the immediate decision making and action necessary to prevent death or any further disability both in the pre-hospital setting by directing emergency medical technicians and in the emergency department. This specialist provides immediate recognition, evaluation, care, stabilization, and disposition of a generally diversified population of adult and pediatric patients in response to acute illness and injury.

Specialty training required prior to certification: Three years

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Emergency Medicine and complete additional training as specified by the board.

Anesthesiology Critical Care Medicine

An Emergency Medicine physician who specializes in Critical Care Medicine diagnoses and treats patients with critical illnesses or injuries, particularly trauma victims and patients with multiple organ dysfunction who require care over a period of hours, days, or weeks. These physicians also coordinate patient care among the primary physician, critical care staff, and other specialists and their primary base of operation is the intensive care unit (ICU) of a hospital.

Emergency Medical Services

An Emergency Medicine physician specializing in Emergency Medical Services has special knowledge and skills for the delivery of medical care of the acutely ill or injured patient in the pre-hospital setting. This care includes the initial patient treatment, stabilization, and transportation in specially equipped ambulances and medical helicopters. The initial care for conditions such as heart attack or stroke may occur in patient homes, public places, and wilderness settings. These medical specialists perform life-saving procedures outside the hospital setting, sometimes when people are still trapped in cars or buildings.

Hospice and Palliative Medicine

An Emergency Medicine physician with special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Internal Medicine-Critical Care Medicine

An Emergency Medicine physician trained in Critical Care Medicine has expertise in the diagnosis, treatment and support of critically ill and injured patients, particularly trauma victims, and patients with multiple organ dysfunction. This physician also coordinates patient care among the primary physician, critical care staff, and other specialists.

Medical Toxicology

Medical Toxicologists are physicians who specialize in the prevention, evaluation, treatment, and monitoring of injury and illness from exposures to drugs and chemicals, as well as biological and radiological agents. These specialists care for people in clinical, academic, governmental, and public health settings, and provide poison control center leadership. Important areas of Medical Toxicology include acute drug poisoning; adverse drug events; drug abuse, addiction and withdrawal; chemicals and hazardous materials; terrorism preparedness; venomous bites and stings; and environmental and workplace exposures.

Pain Medicine

An Emergency Medicine physician who specializes in Pain Medicine provides care for patients with acute, chronic, and/or cancer pain in an emergency department setting while coordinating patient care needs with other specialists.

Pediatric Emergency Medicine

An Emergency Medicine physician who specializes in Pediatric Emergency Medicine has special qualifications to manage emergency treatments in acutely ill or injured infants and children.
Sports Medicine

An Emergency Medicine physician who specializes in preventing, diagnosing, and treating injuries related to participating in sports and/or exercise. In addition to the study of those fields that focus on prevention, diagnosis, treatment, and management of injuries, Sports Medicine also deals with illnesses and diseases that might have effects on health and physical performance.

Undersea and Hyperbaric Medicine

An Emergency Medicine physician who specializes in Undersea and Hyperbaric Medicine treats decompression illness and diving accident cases and uses hyperbaric oxygen therapy to treat such conditions as carbon monoxide poisoning, gas gangrene, non-healing wounds, tissue damage from radiation and burns, and bone infections. This specialist also serves as a consultant to other physicians in all aspects of hyperbaric chamber operations, and assesses risks and applies appropriate standards to prevent disease and disability in divers and other persons working in altered atmospheric conditions.

American Board of Family Medicine

Approved as an ABMS Member Board in 1969

1648 McGrathiana Parkway, Suite 550
Lexington, KY 40511
(859) 269-5626 or (888) 995-5700
www.theabfm.org

Family Medicine

Family Physicians deliver a range of acute, chronic, and preventive medical care services. In addition to diagnosing and treating illness, they also provide preventive care, including routine checkups, health-risk assessments, immunization and screening tests, and personalized counseling on maintaining a healthy lifestyle. Family physicians also manage chronic illness, often coordinating care provided by other subspecialists.

Specialty training required prior to certification: Three years

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Family Medicine and complete additional training as specified by the board.

Adolescent Medicine

A Family Physician who specializes in Adolescent Medicine is a multidisciplinary health care specialist trained in the unique physical, psychological and social characteristics of adolescents and their health care problems and needs.

Geriatric Medicine

A Family Physician with special knowledge of the aging process and special skills in the diagnostic, therapeutic, preventive, and rehabilitative aspects of illness in the elderly. This specialist cares for geriatric patients in the patient’s home, the office, long-term care settings such as nursing homes, and the hospital.

Hospice and Palliative Medicine

A Family Physician with special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Pain Medicine

A Family Physician who specializes in Pain Medicine provides care for patients with acute, chronic and/or cancer pain in both inpatient and outpatient settings while coordinating patient care needs with other specialists.

Sleep Medicine

A Family Physician with demonstrated expertise in the diagnosis and management of clinical conditions that occur during sleep, that disturb sleep, or that are affected by disturbances in the wake-sleep cycle. This specialist is skilled in the analysis and interpretation of comprehensive polysomnography, and well-versed in emerging research and management of a sleep laboratory.

Sports Medicine

A Family Physician who specializes in preventing, diagnosing and treating injuries related to participating in sports and/or exercise. In addition to the study of those fields that focus on prevention, diagnosis, treatment and management of injuries, Sports Medicine also deals with illnesses and diseases that might have effects on health and physical performance.
American Board of Internal Medicine

Approved as an ABMS Member Board in 1936

510 Walnut Street, Suite 1700
Philadelphia, PA 19106
(800) 441-2246
www.abim.org

Internal Medicine

An Internist is a personal physician who provides long-term, comprehensive care in the office and in the hospital, managing both common and complex illnesses of adolescents, adults, and the elderly. Internists are trained in the diagnosis and treatment of cancer, infections, and diseases affecting the heart, blood, kidneys, joints, and the digestive, respiratory, and vascular systems. They are also trained in the essentials of primary care internal medicine, which incorporates an understanding of disease prevention, wellness, substance abuse, mental health, and effective treatment of common problems of the eyes, ears, skin, nervous system, and reproductive organs.

Specialty training required prior to certification: Three years

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Internal Medicine and complete additional training as specified by the board.

Adolescent Medicine

An Internist who specializes in Adolescent Medicine is a multidisciplinary health care specialist trained in the unique physical, psychological, and social characteristics of adolescents, their health care problems and needs.

Adult Congenital Heart Disease

An Internist or Pediatrician who specializes in Adult Congenital Heart Disease has the unique knowledge, skills, and practice required of a cardiologist for evaluating and delivering high quality lifelong care for a wide range of adult patients with congenital heart disease.

Advanced Heart Failure and Transplant Cardiology

An Internist who specializes in Heart Failure and Transplant Cardiology has the special knowledge and skills required of cardiologists for evaluating and optimally managing patients with heart failure, particularly those with advanced heart failure, those with devices, including ventricular assist devices, and those who have undergone or are awaiting transplantation.

Cardiovascular Disease

An Internist who specializes in diseases of the heart and blood vessels and manages complex cardiac conditions, such as heart attacks and life-threatening, abnormal heartbeat rhythms.

Clinical Cardiac Electrophysiology

A field of special interest within the subspecialty of Cardiovascular Disease, which involves intricate technical procedures to evaluate heart rhythms and determine appropriate treatment.

Critical Care Medicine

An Internist trained in Critical Care Medicine has expertise in the diagnosis, treatment, and support of critically ill and injured patients, particularly trauma victims and patients with multiple organ dysfunction. This physician also coordinates patient care among the primary physician, critical care staff, and other specialists.

Endocrinology, Diabetes and Metabolism

An Internist who concentrates on disorders of the internal (endocrine) glands such as the thyroid and adrenal glands. This specialist also deals with disorders such as diabetes, metabolic and nutritional disorders, obesity, pituitary diseases, and menstrual and sexual problems.

Gastroenterology

An Internist (Gastroenterologist) who specializes in diagnosis and treatment of diseases of the digestive organs including the stomach, bowels, liver, and gallbladder. This specialist treats conditions such as abdominal pain, ulcers, diarrhea, cancer, and jaundice and performs complex diagnostic and therapeutic procedures using endoscopes to visualize internal organs.

Geriatric Medicine

An Internist who has special knowledge of the aging process and special skills in the diagnostic, therapeutic, preventive, and rehabilitative aspects of illness in the elderly. This specialist cares for geriatric patients in the patient’s home, the office, and long-term care settings such as nursing homes and the hospital.
Hematology

An Internist (Hematologist) who specializes in diseases of the blood, spleen, and lymph. This specialist treats conditions such as anemia, clotting disorders, sickle cell disease, hemophilia, leukemia, and lymphoma.

Hospice and Palliative Medicine

An Internist with special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Infectious Disease

An Internist who deals with infectious diseases of all types and in all organ systems. Conditions requiring selective use of antibiotics call for this special skill. This physician often diagnoses and treats AIDS patients and patients with fevers which have not been explained. Infectious disease specialists may also have expertise in preventive medicine and travel medicine.

Interventional Cardiology

An area of medicine within the subspecialty of Cardiology, which uses specialized imaging and other diagnostic techniques to evaluate blood flow and pressure in the coronary arteries and chambers of the heart, and uses technical procedures and medications to treat abnormalities that impair the function of the cardiovascular system.

Medical Oncology

An Internist (Medical Oncologist) who specializes in the diagnosis and treatment of all types of cancer and other benign and malignant tumors. This specialist decides on and administers therapy for these malignancies, as well as consults with surgeons and radiotherapists on other treatments for cancer.

Nephrology

An Internist (Nephrologist) who treats disorders of the kidney, high blood pressure, fluid and mineral balance, and dialysis of body wastes when the kidneys do not function. This specialist consults with surgeons about kidney transplantation.

Pulmonary Disease

An Internist (Pulmonologist) who treats diseases of the lungs and airways. The specialist diagnoses and treats cancer, pneumonia, pleurisy, asthma, occupational and environmental diseases, bronchitis, sleep disorders, emphysema, and other complex disorders of the lungs.

Rheumatology

An Internist (Rheumatologist) who treats diseases of joints, muscle, bones, and tendons. This specialist diagnoses and treats arthritis, back pain, muscle strains, common athletic injuries, and collagen diseases.

Sleep Medicine

An Internist with demonstrated expertise in the diagnosis and management of clinical conditions that occur during sleep, that disturb sleep, or that are affected by disturbances in the wake-sleep cycle. This specialist is skilled in the analysis and interpretation of comprehensive polysomnography, and well-versed in emerging research and management of a sleep laboratory.

Sports Medicine

An Internist who specializes in preventing, diagnosing, and treating injuries related to participating in sports and/or exercise. In addition to the study of those fields that focus on prevention, diagnosis, treatment, and management of injuries. Sports Medicine also deals with illnesses and diseases that might have effects on health and physical performance.

Transplant Hepatology

An Internist with special knowledge and the skill required of a Gastroenterologist to care for patients prior to and following hepatic transplantation that spans all phases of liver transplantation. Selection of appropriate recipients requires assessment by a team having experience in evaluating the severity and prognosis of patients with liver disease.
American Board of Medical Genetics and Genomics

Approved as an ABMS Member Board in 1991

9650 Rockville Pike
Bethesda, MD 20814
(301) 634-7315
www.abmgg.org

Medical Genetics and Genomics

Medical Geneticists specialize in medicine that involves the interaction between genes and health. They are trained to evaluate, diagnose, manage, treat, and counsel individuals of all ages with hereditary disorders. This specialist uses modern cytogenetic, molecular, radiologic, and biochemical testing to assist in specialized diagnostic evaluations, implement needed therapeutic interventions, and provide genetic counseling and prevention through prenatal and preimplantation diagnosis. The Medical Geneticist plans and coordinates screening for genetic diseases involving single gene and chromosomal disorders, congenital anomalies, inborn errors of metabolism, multifactorial conditions, and common disorders with hereditary factors.

Specialty training required prior to certification: Two or four years

To become certified in a particular area of Medical Genetics and Genomics, a physician must complete additional training before, during, or after residency as specified by the board.

The American Board of Medical Genetics and Genomics issues multiple general certificates in the following areas of Medical Genetics and Genomics:

Clinical Biochemical Genetics

A Clinical Biochemical Geneticist demonstrates competence in performing and interpreting a wide range of specialized, laboratory biochemical analyses relevant to the diagnosis and management of inherited metabolic disorders. The specialist acts as a consultant regarding laboratory diagnosis on a broad range of biochemical genetic disorders.

Clinical Cytogenetics

A Clinical Cytogeneticist demonstrates competence in performing and interpreting laboratory diagnostic tests involving the relationship between the structure and number of chromosomes associated with inherited and acquired disorders, including cancer. This specialist is a consultant regarding laboratory diagnosis of this broad range of disorders.

Clinical Genetics (MD)

A Clinical Geneticist demonstrates competence in providing comprehensive diagnostic, treatment, management, and counseling services for individuals and families at risk for clinical disorders with a genetic basis. The specialist is trained to evaluate individuals of all ages who are at risk for hereditary conditions.

Clinical Molecular Genetics

A Clinical Molecular Geneticist demonstrates competence in performing and interpreting molecular analyses relevant to the diagnosis and management of human genetic diseases, and is a consultant regarding laboratory diagnosis of a broad range of inherited disorders.

Subspecialties

To become certified in a particular subspecialty, a physician must complete additional training as specified by the board.

Medical Biochemical Genetics

A Medical Biochemical Geneticist demonstrates competence in the diagnosis, medical treatment, and management of individuals with inherited metabolic conditions presenting clinically from infancy through adulthood, including via newborn screening. The subspecialist provides direct care and consultative care for individuals of all ages who are diagnosed with inborn errors of metabolism.

Molecular Genetic Pathology

A Molecular Genetic Pathologist is expert in the principles, theory, and technologies of molecular biology and molecular genetics. This expertise is used to make or confirm diagnoses of Mendelian genetic disorders, of human development, infectious diseases, and malignancies and to assess the natural history of those disorders. A Molecular Genetic Pathologist provides information about gene structure, function, and alteration and applies laboratory techniques for diagnosis, treatment, and prognosis for individuals with related disorders.
**Neurological Surgery**

Neurological Surgery constitutes a medical discipline and surgical specialty that provides care for adult and pediatric patients in the treatment of pain or pathological processes that may modify the function or activity of the central nervous system (e.g., brain, hypophysis, and spinal cord), the peripheral nervous system (e.g., cranial, spinal, and peripheral nerves), the autonomic nervous system, the supporting structures of these systems (e.g., meninges, skull and skull base, and vertebral column), and their vascular supply (e.g., intracranial, extracranial, and spinal vasculature).

Treatment encompasses both non-operative management (e.g., prevention, diagnosis—including image interpretation—and treatments such as, but not limited to, neurocritical intensive care and rehabilitation) and operative management with its associated image use and interpretation (e.g., endovascular surgery, functional and restorative surgery, stereotactic radiosurgery, and spinal fusion—including its instrumentation).

**Specialty training required prior to certification:** Seven years of neurosurgical residency training. At minimum, this time must consist of 4 1/2 years of core clinical surgery, including:

- 12 months as chief resident;
- 3 months of basic neuroscience;
- 3 months of critical care relevant to neurosurgery patients, and
- 6 months of structured education in general patient care (e.g., trauma, general surgery, orthopaedic surgery, otolaryngology, plastic surgery, etc.)

An additional 2 1/2 years of electives are required such as neuropathy, neuroradiology, research, and/or more neurosurgery, possibly in areas of special interest such as complex spine surgery, endovascular, or pediatric neurosurgery, and/or clinical and non-clinical neurosciences.

**Neurology**

A Neurologist specializes in the evaluation and treatment of all types of disease or impaired function of the brain, spinal cord, peripheral nerves, muscles, and autonomic nervous system, as well as the blood vessels that relate to these structures. These disorders include: stroke, brain and spinal tumors, muscular dystrophy, headache and other pain, meningitis, encephalitis, epilepsy, Parkinson’s disease, Alzheimer’s disease and other memory disorders, multiple sclerosis, and effects of systemic diseases, like high blood pressure and diabetes, on the nervous system.

**Specialty training required prior to certification:** Four years

**Neurology with Special Qualification in Child Neurology**

Child Neurologists diagnose and treat similar disorders in infants, children, and adolescents. They also have special competence in genetic and metabolic problems, malformation, retardation and other neurodevelopmental problems of childhood.

**Specialty training required prior to certification:** Five years

**Subspecialties**

To become certified in a particular subspecialty, a physician must be certified by the American Board of Psychiatry and Neurology and complete additional training as specified by the board.

**Brain Injury Medicine**

Brain injury medicine is a subspecialty focused on the prevention, evaluation, treatment and rehabilitation of individuals with acquired brain injury. These physicians provide a high level of care for patients with brain injury and their families in hospital and post-acute settings, and over the continuum of care to facilitate the process of recovery and improve medical and functional outcomes.
Clinical Neurophysiology

A Psychiatrist, Neurologist, Child Neurologist, or Physiatrist who focuses on the evaluation and treatment of central, peripheral, and autonomic nervous system disorders using a combination of clinical evaluation and electrophysiologic testing such as electroencephalography (EEG), electromyography (EMG), and nerve conduction studies (NCS), among others.

Epilepsy

A Neurologist or Child Neurologist who focuses on the evaluation and treatment of adults and children with recurrent seizure activity and seizure disorders. Specialists in Epilepsy (Epileptologists) possess specialized knowledge in the science, clinical evaluation, and management of these disorders.

Hospice and Palliative Medicine

These physicians have special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Neurodevelopmental Disabilities

A Child Neurologist or Pediatrician who focuses on the evaluation and treatment of chronic conditions that affect the developing and mature nervous system such as cerebral palsy, mental retardation, and chronic behavioral syndromes or neurologic conditions.

Neuromuscular Medicine

A Neurologist, Child Neurologist, or Physiatrist who focuses on the evaluation and treatment of disorders of nerve, muscle or neuromuscular junction, including amyotrophic lateral sclerosis (ALS), peripheral neuropathies (e.g., diabetic), various muscular dystrophies, congenital and acquired myopathies, inflammatory myopathies (e.g., polymyositis), and neuromuscular transmission disorders (e.g., myasthenia gravis).

Pain Medicine

A Neurologist or Child Neurologist who specializes in Pain Medicine diagnoses and treats patients experiencing problems with acute, chronic and/or cancer pain in both hospital and outpatient settings and coordinates patient care needs with other specialists.

Sleep Medicine

A Neurologist or Child Neurologist with demonstrated expertise in the diagnosis and management of clinical conditions that occur during sleep, that disturb sleep, or that are affected by disturbances in the wake-sleep cycle. This specialist is skilled in the analysis and interpretation of comprehensive polysomnography, and well-versed in emerging research and management of a sleep laboratory.

Vascular Neurology

A Neurologist or Child Neurologist who focuses on the evaluation and treatment of vascular events affecting the brain or spinal cord, such as ischemic stroke, intracranial hemorrhage, spinal cord ischemia, and spinal cord hemorrhage.

American Board of Nuclear Medicine

Approved as an ABMS Member Board in 1971
4555 Forest Park Blvd., Suite 119
St. Louis, MO 63108
(314) 367-2225
www.abnm.org

Nuclear Medicine

A Nuclear Medicine specialist uses radioactive chemicals for diagnosis and therapy. Radioactive chemicals are used to produce images that provide information about organ function, as well as cellular function on a molecular level, which is known as molecular imaging. Molecular imaging can be combined with anatomical imaging by using specialized cameras. The most common diagnostic applications of Nuclear Medicine include the early detection of coronary artery disease, cancer diagnosis and staging, and the evaluation of the effect of cancer treatment. The fusion of molecular and anatomical information increases diagnostic accuracy and changes medical management. Radioactive materials are also used to treat a variety of health problems, including thyroid disorders and cancer.

Specialty training required prior to certification: Three years
Obstetrics and Gynecology

An Obstetrician/Gynecologist focuses on the health of women before, during, and after childbearing years, diagnosing and treating conditions of the reproductive system and associated disorders.

Specialty training required prior to certification: Four years plus two years in clinical practice before certification is complete.

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Obstetrics and Gynecology and complete additional training as specified by the board.

Critical Care Medicine

An Obstetrician/Gynecologist who specializes in Critical Care Medicine has expertise in the diagnosis, treatment, and support of critically ill and injured patients, particularly trauma victims and patients with multiple organ dysfunction.

Female Pelvic Medicine and Reconstructive Surgery

A subspecialist in Female Pelvic Medicine and Reconstructive Surgery is a physician in Obstetrics and Gynecology or Urology who, by virtue of education and training, is prepared to provide consultation and comprehensive management of women with complex benign pelvic conditions, lower urinary tract disorders, and pelvic floor dysfunction. Comprehensive management includes those diagnostic and therapeutic procedures necessary for the total care of the patient with these conditions and complications resulting from them.

Gynecologic Oncology

The Gynecologic Oncologist provides consultation and comprehensive management, including those diagnostic and therapeutic procedures of patients with gynecologic cancer and resulting complications.

Hospice and Palliative Medicine

An Obstetrician/Gynecologist with special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Maternal and Fetal Medicine

An Obstetrician/Gynecologist with specialization in Maternal and Fetal Medicine focuses on patients with complications of pregnancy and their effect on both the mother and the fetus.

Reproductive Endocrinology/Infertility

The Reproductive Endocrinologist concentrates on hormonal functioning as it pertains to reproduction as well as the issue of infertility. They also are trained to evaluate and treat hormonal dysfunctions in females outside of infertility.

Ophthalmology

Ophthalmology is a specialty focused on the medical and surgical care of the eyes. Ophthalmologists are the only physicians medically trained to manage the complete range of eye and vision care. They can prescribe glasses and contact lenses, dispense medications, diagnose and treat eye conditions and diseases, and perform surgeries.

Specialty training required prior to certification: Four years
Orthopaedic Surgery

An Orthopaedic Surgeon is educated in the preservation, investigation, and restoration of the form and function of the extremities, spine, and associated structures by medical, surgical, and physical means. This specialist is involved with the care of patients whose musculoskeletal problems include congenital deformities, trauma, infections, tumors, metabolic disturbances of the musculoskeletal system, deformities, injuries, and degenerative diseases of the spine, hands, feet, knee, hip, shoulder, and elbow in children and adults. An Orthopaedic Surgeon is also concerned with primary and secondary muscular problems and the effects of central or peripheral nervous system lesions of the musculoskeletal system.

Specialty training required prior to certification: A minimum of five years (including Surgery training) plus two years in clinical practice before final certification is achieved.

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Orthopaedic Surgery and complete additional training as specified by the board.

Orthopaedic Sports Medicine

An Orthopaedic Surgeon educated in Sports Medicine has expertise in the surgical, medical, and rehabilitative care for all structures of the musculoskeletal system directly affected by participation in a sporting activity. This specialist is proficient in areas including conditioning, training and fitness, athletic performance, the impact of dietary supplements, pharmaceuticals, and nutrition on performance and health, coordination of care within the team setting utilizing other health care professionals, field evaluation and management, soft tissue biomechanics, and injury healing and repair. Knowledge and understanding of the principles and techniques of rehabilitation, athletic equipment and orthotic devices enables the specialist to prevent and manage athletic injuries.

Surgery of the Hand

A Surgeon trained in Surgery of the Hand has expertise in the surgical, medical, and rehabilitative care of patients with diseases, injuries, and disorders affecting the hand, wrist and forearm. Common conditions treated by a Hand Surgeon include carpal tunnel syndrome, trigger fingers, ganglia (lumps), sports injuries to the hand and wrist, and hand injuries involving fractures, dislocations, lacerated tendons, nerves, and arteries. Hand Surgeons may be General Surgeons, Orthopedic Surgeons, or Plastic Surgeons who have received additional training in this area.

Otolaryngology

An Otolaryngologist-Head and Neck Surgeon provides medical and/or surgical therapy for the prevention of diseases, allergies, neoplasms, deformities, disorders, and/or injuries of the ears, nose, sinuses, throat, respiratory, and upper alimentary systems, face, jaws, and the other head and neck systems. Head and neck oncology, facial, plastic, and reconstructive surgery and the treatment of disorders of hearing and voice are fundamental areas of expertise.

Specialty training required prior to certification: Five years

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Otolaryngology and complete additional training as specified by the board.

Neurotology

The Neurotologist has special expertise in the management of diseases of the inner ear, temporal bone, and skull base, including tumors and other conditions.
Pediatric Otolaryngology

A Pediatric Otolaryngologist has special expertise in the management of infants and children with disorders that include congenital and acquired conditions involving the aerodigestive tract, nose and paranasal sinuses, the ear and other areas of the head and neck, and in the diagnosis, treatment, and management of childhood disorders of voice, speech, language, and hearing.

Plastic Surgery Within the Head and Neck

An Otolaryngologist trained in this area has additional expertise in plastic and reconstructive procedures within the head, face, neck, and associated structures, including cutaneous head and neck oncology and reconstruction, management of maxillofacial trauma, soft tissue repair, and cosmetic surgery.

Sleep Medicine

An Otolaryngologist with demonstrated expertise in the diagnosis and management of clinical conditions that occur during sleep, that disturb sleep, or that are affected by disturbances in the wake-sleep cycle. This specialist is skilled in the analysis and interpretation of comprehensive polysomnography, and well-versed in emerging research and management of a sleep laboratory.

American Board of Pathology

Approved as an ABMS Member Board in 1936

4830 Kennedy Blvd., Suite 690
Tampa, FL 33609
(813) 286-2444
www.abpath.org

Pathology

A Pathologist deals with the causes and nature of disease and contributes to diagnosis, prognosis, and treatment through knowledge gained by the laboratory application of the biologic, chemical, and physical sciences. This specialist uses information gathered from the microscopic examination of tissue specimens, cells and body fluids, and from clinical laboratory tests on body fluids and secretions for the diagnosis, exclusion, and monitoring of disease.

To acknowledge the diverse activities in the practice of Pathology and to accommodate the interests of individuals wanting to enter the field, the American Board of Pathology offers primary certification through the following three routes: Pathology-Anatomic/Pathology-Clinical, Pathology-Anatomic, or Pathology-Clinical. A variety of subspecialty certificates are offered. Primary certification in Pathology-Anatomic or Pathology-Clinical may be combined with some of the subspecialty certifications.

Specialty training required prior to certification: Three to four years

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Pathology and complete additional training as specified by the board.

Blood Banking/Transfusion Medicine

A Pathologist who specializes in Blood Banking/Transfusion Medicine is responsible for the maintenance of an adequate blood supply, blood donor and patient-recipient safety, and appropriate blood utilization. Pre-transfusion compatibility testing and antibody testing assure that blood transfusions, when indicated, are as safe as possible. This specialist directs the preparation and safe use of specially prepared blood components, including red blood cells, white blood cells, platelets and plasma constituents, and marrow or stem cells for transplantation.

Clinical Informatics

Physicians who practice Clinical Informatics collaborate with other health care and information technology professionals to analyze, design, implement, and evaluate information and communication systems that enhance individual and population health outcomes, improve patient care, and strengthen the clinician-patient relationship. Clinical Informaticians use their knowledge of patient care combined with their understanding of informatics concepts, methods, and tools to: assess information and knowledge needs of health care professionals and patients; characterize, evaluate, and refine clinical processes; develop, implement, and refine clinical decision support systems; and lead or participate in the procurement, customization, development, implementation, management, evaluation, and continuous improvement of clinical information systems.

Cytopathology

A Cytopathologist is an Anatomic Pathologist trained in the diagnosis of human disease by means of the study of cells obtained from body secretions and fluids; by scraping, washing, or sponging the surface of a lesion; or by the aspiration of a tumor mass or body organ with a fine needle. A major aspect of a Cytopathologist’s practice is the interpretation of Papanicolaou-stained smears.
of cells from the female reproductive systems (the “Pap” test). However, the Cytopathologist’s expertise is applied to the diagnosis of cells from all systems and areas of the body and in consultation to all medical specialists.

**Dermatopathology**

A Dermatopathologist is expert in diagnosing and monitoring diseases of the skin, including infectious, immunologic, degenerative, and neoplastic diseases. This entails the examination and interpretation of specially prepared tissue sections, cellular scrapings and smears of skin lesions by means of light microscopy, electron microscopy, and fluorescence microscopy.

**Neuropathology**

A Neuropathologist is expert in the diagnosis of diseases of the nervous system and skeletal muscles and functions as a consultant primarily to Neurologists and Neurosurgeons. This specialist is knowledgeable in the infirmities of humans as they affect the nervous and neuromuscular systems, be they degenerative, infectious, metabolic, immunologic, neoplastic, vascular, or physical in nature.

**Pathology - Chemical**

A Chemical Pathologist has expertise in the biochemistry of the human body as it applies to the understanding of the cause and progress of disease. This specialist functions as a clinical consultant in the diagnosis and treatment of human disease. Chemical Pathology entails the application of biochemical data to the detection, confirmation, or monitoring of disease.

**Pathology - Forensic**

A Forensic Pathologist is expert in investigating and evaluating cases of sudden, unexpected, suspicious, and violent death as well as other specific classes of death defined by law. The Forensic Pathologist serves the public as coroner or medical examiner, or by performing medicolegal autopsies for such officials.

**Pathology - Hematology**

A Hematopathologist is expert in diseases that affect blood cells, blood clotting mechanisms, bone marrow, and lymph nodes. This specialist has the knowledge and technical skills essential for the laboratory diagnosis of anemias, leukemias, lymphomas, bleeding disorders, and blood clotting disorders.

**Pathology - Medical Microbiology**

A Medical Microbiologist is expert in the isolation and identification of microbial agents that cause infectious disease. Viruses, bacteria, and fungi, as well as parasites are identified and, where possible, tested for susceptibility to appropriate antimicrobial agents.

**Pathology - Molecular Genetic**

A Molecular Genetic Pathologist is expert in the principles, theory and technologies of molecular biology and molecular genetics. This expertise is used to make or confirm diagnoses of Mendelian genetic disorders and disorders of human development, infectious diseases, and malignancies and to assess the natural history of those disorders. The Molecular Genetic Pathologist provides information about gene structure, function, and alteration and applies laboratory techniques for diagnosis, treatment and prognosis for individuals with related disorders.

**Pathology - Pediatric**

A Pediatric Pathologist is expert in the laboratory diagnosis of diseases that occur during fetal growth, infancy, and child development. The practice requires a strong foundation in general pathology and substantial understanding of normal growth and development, along with extensive knowledge of pediatric medicine.

**American Board of Pediatrics**

Approved as an ABMS Member Board in 1935

111 Silver Cedar Court
Chapel Hill, NC 27514
(919) 929-0461
www.abp.org

**Pediatrics**

A physician specializing in Pediatrics is concerned with the physical, emotional, and social health of children from birth to young adulthood. Care encompasses a broad spectrum of health services ranging from preventive health care to the diagnosis and treatment of acute and chronic diseases. The Pediatrician deals with biological, social, and environmental influences on the developing child and with the impact of disease and dysfunction on development.

*Specialty training required prior to certification: Three years*
Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Pediatrics and complete additional training as specified by the board.

Adolescent Medicine

A Pediatrician who specializes in Adolescent Medicine is a multidisciplinary health care specialist trained in the unique physical, psychological, and social characteristics of adolescents, their health care problems and needs.

Child Abuse Pediatrics

A Pediatrician who specializes in Child Abuse Pediatrics serves as a resource to children, families, and communities by accurately diagnosing abuse; consulting with community agencies on child safety; providing expertise in courts of law; treating consequences of abuse and neglect; directing child abuse and neglect prevention programs; and participating on multidisciplinary teams investigating and managing child abuse cases.

Developmental - Behavioral Pediatrics

A Pediatrician who specializes in Developmental-Behavioral Pediatrics possesses special skills, training, and experience to foster understanding and promotion of optimal development of children and families through research, education, clinical care, and advocacy efforts. This physician assists in the prevention, diagnosis, and management of developmental difficulties and problematic behaviors in children and in the family dysfunctions that compromise children's development.

Hospice and Palliative Medicine

A Pediatrician with special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Medical Toxicology

Medical Toxicologists are physicians who specialize in the prevention, evaluation, treatment, and monitoring of injury and illness from exposures to drugs and chemicals, as well as biological and radiological agents. These specialists care for people in clinical, academic, governmental, and public health settings, and provide poison control center leadership. Important areas of Medical Toxicology include acute drug poisoning; adverse drug events; drug abuse, addiction and withdrawal; chemicals and hazardous materials; terrorism preparedness; venomous bites and stings; and environmental and workplace exposures.

Neonatal-Perinatal Medicine

A Pediatrician specializing in Neonatal-Perinatal Medicine acts as the principal care provider for sick newborn infants. This specialist's clinical expertise is used for direct patient care and for consulting with obstetrical colleagues to plan for the care of mothers who have high-risk pregnancies.

Pediatric Cardiology

A Pediatric Cardiologist provides comprehensive care to patients with cardiovascular problems. This specialist is skilled in selecting, performing, and evaluating the structural and functional assessment of the heart and blood vessels, and the clinical evaluation of cardiovascular disease.

Pediatric Critical Care Medicine

A Pediatrician who specializes in Pediatric Critical Care Medicine is expert in advanced life support for children from the term or near-term neonate to the adolescent. This competence extends to the critical care management of life-threatening organ system failure from any cause in both medical and surgical patients, and to the support of vital physiological functions. This specialist may have administrative responsibilities for intensive care units and also facilitates patient care among other specialists.

Pediatric Emergency Medicine

A Pediatrician specializing in Pediatric Emergency Medicine has special qualifications to manage emergency treatments in acutely ill or injured infants and children.

Pediatric Endocrinology

A Pediatrician with specialization in Pediatric Endocrinology provides expert care to infants, children and adolescents who have diseases that result from an abnormality in the endocrine glands (glands which secrete hormones). These diseases include diabetes mellitus, growth failure, unusual size for age, early or late pubertal development, birth defects, the genital region, and disorders of the thyroid and the adrenal and pituitary glands.

Pediatric Gastroenterology

A Pediatrician specializing in Pediatric Gastroenterology specializes in the diagnosis and treatment of diseases of the digestive systems of infants, children, and adolescents. The Pediatric Gastroenterologist treats conditions such as abdominal pain, ulcers, diarrhea, cancer, and jaundice and performs complex diagnostic and therapeutic procedures using lighted scopes to see internal organs.
Pediatric Hematology-Oncology

A Pediatrician who specializes in Pediatric Hematology-Oncology is trained in the combination of pediatrics, hematology, and oncology to recognize and manage pediatric blood disorders and cancerous diseases.

Pediatric Infectious Diseases

A Pediatrician who specializes in Pediatric Infectious Diseases cares for children through the diagnosis, treatment, and prevention of infectious diseases. This specialist can apply specific knowledge to affect a better outcome for pediatric infections with complicated courses, underlying diseases that predispose to unusual or severe infections, unclear diagnoses, uncommon diseases, and complex or investigational treatments.

Pediatric Nephrology

A Pediatrician with special expertise in Pediatric Nephrology deals with the normal and abnormal development and maturation of the kidney and urinary tract; the mechanisms by which the kidney can be damaged; the evaluation and treatment of renal diseases; fluid and electrolyte abnormalities; hypertension; and renal replacement therapy.

Pediatric Pulmonology

A Pediatrician specializing in Pediatric Pulmonology is dedicated to the prevention and treatment of all respiratory diseases affecting infants, children, and young adults. This specialist is knowledgeable about the growth and development of the lung, assessment of respiratory function in infants and children, and experienced in a variety of invasive and noninvasive diagnostic techniques.

Pediatric Rheumatology

A Pediatrician who specializes in Pediatric Rheumatology treats diseases of joints, muscle, bones, and tendons. A Pediatric Rheumatologist diagnoses and treats arthritis, back pain, muscle strains, common athletic injuries, and collagen diseases.

Pediatric Transplant Hepatology

The Pediatrician who specializes in Transplant Hepatology possesses the special knowledge, skill and expertise required of Pediatric Gastroenterologists to care for patients prior to and following hepatic transplantation. Selection of appropriate recipients requires assessment by a team having experience in evaluating the severity and prognosis of patients with liver disease.

Sleep Medicine

A Pediatrician with demonstrated expertise in the diagnosis and management of clinical conditions that occur during sleep, that disturb sleep, or that are affected by disturbances in the wake-sleep cycle. This specialist is skilled in the analysis and interpretation of comprehensive polysomnography, and well-versed in emerging research and management of a sleep laboratory.

Sports Medicine

A Pediatrician who specializes in preventing, diagnosing and treating injuries related to participating in sports and/or exercise. In addition to the study of those fields that focus on prevention, diagnosis, treatment, and management of injuries, sports medicine also deals with illnesses and diseases that might have effects on health and physical performance.
American Board of Physical Medicine and Rehabilitation

Approved as an ABMS Member Board in 1947

3015 Allegro Park Lane, SW
Rochester, MN 55902
(507) 282-1776
www.abpmr.org

Physical Medicine and Rehabilitation

A specialist in Physical Medicine and Rehabilitation, also called a Physiatrist, evaluates and treats patients with physical and/or cognitive impairments and disabilities that result from musculoskeletal conditions (such as neck or back pain, or sports or work injuries), neurological conditions (such as stroke, brain injury, or spinal cord injury), or medical conditions. Physicians have expertise in therapeutic exercise, medications, and injections for management of pain and spasticity; electrodiagnosis; prostheses (artificial limbs); orthoses (braces); and other equipment to assist daily activities, and coordinate treatment to help patients improve their physical, psychological, social, and vocational function.

Specialty training required prior to certification: Four years plus one year clinical practice.

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Physical Medicine and Rehabilitation and complete additional training as specified by the board.

Brain Injury Medicine

A Physiatrist who specializes in Brain Injury Medicine focuses on the prevention, evaluation, treatment, and rehabilitation of individuals with acquired brain injury. This specialist addresses a range of injury-related disorders that have psychosocial, educational, and vocational consequences, as well as related injuries of the central nervous system. He or she also works with an interdisciplinary team to facilitate recovery and improve patients’ health and function.

Hospice and Palliative Medicine

A Physiatrist who specializes in Hospice and Palliative Medicine has special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Neuromuscular Medicine

A Physiatrist who specializes in Neuromuscular Medicine focuses on the evaluation and treatment of disorders of nerve, muscle, or neuromuscular junction, including amyotrophic lateral sclerosis (ALS), peripheral neuropathies (e.g., diabetic), various muscular dystrophies, congenital and acquired myopathies, inflammatory myopathies (e.g., polymyositis) and neuromuscular transmission disorders (e.g., myasthenia gravis).

Pain Medicine

A Physiatrist who specializes in Pain Medicine diagnoses and treats patients experiencing problems with acute, chronic, and/or cancer pain in both hospital and outpatient settings and coordinates patient care needs with other specialists.

Pediatric Rehabilitation Medicine

A Physiatrist who specializes in Pediatric Rehabilitation Medicine diagnoses and manages congenital and childhood-onset impairments and disability, such as cerebral palsy, spina bifida, acquired brain or spinal cord injury, amputation, sports injuries, and muscle and nerve diseases. This specialist works with an interdisciplinary team to improve a child’s mobility and daily function at home, in the community, and at school by prescribing equipment and therapies and managing medical conditions such as spasticity, pain, bladder or bowel dysfunction, and nutrition.

Spinal Cord Injury Medicine

A Physiatrist who specializes in Spinal Cord Injury Medicine evaluates and manages patients with spinal cord injuries caused by trauma or from medical conditions, such as multiple sclerosis, Guillain Barré syndrome, arthritis, infection, transverse myelitis, cancer and spina bifida. This specialist works with an interdisciplinary team and prescribes equipment and therapies to enhance mobility and self care skills; manage medical conditions such as pressure ulcers, pain, spasticity, bladder and bowel dysfunction, respiratory health, and mood disorders; and work to help patients return to their community and vocation.

Sports Medicine

A Physiatrist who specializes Sports Medicine focuses on the prevention, diagnosis, and treatment of injuries related to participation in sports and exercise. Additionally, this specialist also treats illnesses and diseases that might have effects on health and physical performance.
Plastic Surgery

A Plastic Surgeon deals with the repair, reconstruction, or replacement of physical defects of form or function involving the skin, musculoskeletal system, craniomaxillofacial structures, hand, extremities, breast, and trunk, and external genitalia or cosmetic enhancement of these areas of the body. Cosmetic surgery is an essential component of plastic surgery. The Plastic Surgeon uses cosmetic surgical principles to both improve overall appearance and to optimize the outcome of reconstructive procedures.

Specialty training required prior to certification: Six years

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by the American Board of Plastic Surgery and complete additional training as specified by the board.

Plastic Surgery Within the Head and Neck

A Plastic Surgeon trained in this area has additional expertise in plastic and reconstructive procedures within the head, face, neck, and associated structures, including cutaneous head and neck oncology and reconstruction, management of maxillofacial trauma, soft tissue repair, and neural surgery.

Surgery of the Hand

A Surgeon trained in Surgery of the Hand has expertise in the surgical, medical, and rehabilitative care of patients with diseases, injuries, and disorders affecting the hand, wrist, and forearm. Common conditions treated by a hand surgeon include carpal tunnel syndrome, trigger fingers, ganglia (lumps), sports injuries to the hand and wrist, and hand injuries involving fractures, dislocations, lacerated tendons, nerves, and arteries. Hand Surgeons may be General Surgeons, Orthopedic Surgeons or Plastic Surgeons who have received additional training in this area.

Preventive Medicine

A Preventive Medicine specialist focuses on the health of individuals and defined populations in order to protect, promote, and maintain health and well-being, and to prevent disease, disability, and premature death. They may be a specialist in General Preventive Medicine, Public Health, Occupational Medicine, or Aerospace Medicine. The distinctive components of Preventive Medicine include:

» Biostatistics and the application of biostatistical principles and methodology;
» Epidemiology and its application to population-based medicine and research;
» Health services management and administration including: developing, assessing and assuring health policies; planning, implementing, directing, budgeting and evaluating population health and disease management programs; and utilizing legislative and regulatory processes to enhance health;
» Control of environmental factors that may adversely affect health;
» Control and prevention of occupational factors that may adversely affect health safety;
» Clinical preventive medicine activities, including measures to promote health and prevent the occurrence, progression, and disabling effects of disease and injury; and
» Assessment of social, cultural, and behavioral influences on health.

Specialty training required prior to certification: Three years
Subspecialties

To become certified in a particular subspecialty, a physician must be certified by The American Board of Preventive Medicine and complete additional training as specified by the board.

Clinical Informatics

Physicians who practice Clinical Informatics collaborate with other health care and information technology professionals to analyze, design, implement, and evaluate information and communication systems that enhance individual and population health outcomes, improve patient care, and strengthen the clinician-patient relationship. Clinical Informaticians use their knowledge of patient care combined with their understanding of informatics concepts, methods, and tools to: assess information and knowledge needs of health care professionals and patients; characterize, evaluate, and refine clinical processes; develop, implement, and refine clinical decision support systems; and lead or participate in the procurement, customization, development, implementation, management, evaluation, and continuous improvement of clinical information systems.

Medical Toxicology

Medical Toxicologists are physicians who specialize in the prevention, evaluation, treatment, and monitoring of injury and illness from exposures to drugs and chemicals, as well as biological and radiological agents. These specialists care for people in clinical, academic, governmental, and public health settings, and provide poison control center leadership. Important areas of Medical Toxicology include acute drug poisoning; adverse drug events; drug abuse, addiction and withdrawal; chemicals and hazardous materials; terrorism preparedness; venomous bites and stings; and environmental and workplace exposures.

Undersea and Hyperbaric Medicine

A Preventive Medicine physician who specializes in Undersea and Hyperbaric Medicine treats decompression illness and diving accident cases and uses hyperbaric oxygen therapy to treat such conditions as carbon monoxide poisoning, gas gangrene, non-healing wounds, tissue damage from radiation and burns, and bone infections. This specialist also serves as consultant to other physicians in all aspects of hyperbaric chamber operations, and assesses risks and applies appropriate standards to prevent disease and disability in divers and other persons working in altered atmospheric conditions.

Psychiatry

A Psychiatrist specializes in the evaluation and treatment of mental, addictive, and emotional disorders such as schizophrenia and other psychotic disorders, mood disorders, anxiety disorders, substance-related disorders, sexual and gender identity disorders, and adjustment disorders.

Subspecialties

To become certified in a particular subspecialty, a physician must be certified by The American Board of Psychiatry and Neurology and complete additional training as specified by the board.

Addiction Psychiatry

A Psychiatrist who focuses on the evaluation and treatment of individuals with alcohol, drug, or other substance-related disorders and of individuals with the dual diagnosis of substance-related and other psychiatric disorders.

Child and Adolescent Psychiatry

A Psychiatrist who focuses on the evaluation and treatment of developmental, behavioral, emotional, and mental disorders of childhood and adolescence.

Clinical Neurophysiology

A Psychiatrist who focuses on the evaluation and treatment of central, peripheral, and autonomic nervous system disorders using a combination of clinical evaluation and electrophysiologic testing such as electroencephalography (EEG), electromyography (EMG) and nerve conduction studies (NCS), among others.
Forensic Psychiatry

A Psychiatrist who focuses on the interrelationships between psychiatry and civil, criminal, and administrative law. This specialist evaluates individuals involved with the legal system and provides specialized treatment to those incarcerated in jails, prisons, and forensic psychiatry hospitals.

Geriatric Psychiatry

A Psychiatrist who focuses on the evaluation and treatment of mental and emotional disorders in the elderly.

Hospice and Palliative Medicine

These physicians have special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Pain Medicine

A Psychiatrist who specializes in Pain Medicine diagnoses and treats patients experiencing problems with acute, chronic, and/or cancer pain in both hospital and outpatient settings and coordinates patient care needs with other specialists.

Psychosomatic Medicine

A Psychiatrist who specializes in the diagnosis and treatment of psychiatric disorders and symptoms in complex medically ill patients. This subspecialty includes treatment of patients with acute or chronic medical, neurological, obstetrical, or surgical illness in which psychiatric illness is affecting their medical care and/or quality of life; such as HIV infection, organ transplantation, heart disease, renal failure, cancer, stroke, traumatic brain injury, high-risk pregnancy, and COPD, among others. Patients also may be those who have a psychiatric disorder that is the direct consequence of a primary medical condition, or a somatoform disorder or psychological factors affecting a general medical condition.

Sleep Medicine

A Psychiatrist with demonstrated expertise in the diagnosis and management of clinical conditions that occur during sleep, that disturb sleep, or that are affected by disturbances in the wake-sleep cycle. This specialist is skilled in the analysis and interpretation of comprehensive polysomnography, and well-versed in emerging research and management of a sleep laboratory.

American Board of Radiology

Approved as an ABMS Member Board in 1935

5441 E. Williams Circle
Tucson, AZ 85711
(520) 790-2900
www.theabr.org

Radiology

A Radiologist is a physician who uses imaging methodologies to diagnose and manage patients and provide therapeutic options. Physicians practicing in the field of Radiology specialize in Diagnostic Radiology, Interventional Radiology, and Diagnostic Radiology or Radiation Oncology. The board also certifies in Medical Physics and issues specific certificates within each discipline.

I. Diagnostic Radiology

A Diagnostic Radiologist uses x-rays, radionuclides, ultrasound, and electromagnetic radiation to diagnose and treat disease. Training required is six years: one year of clinical internship, followed by five years of Radiology training. Anyone who wishes to specialize in one of the five subspecialty areas listed below must first certify in Diagnostic Radiology.

Subspecialties

Hospice and Palliative Medicine

A specialist in Hospice and Palliative Medicine uses special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Neuroradiology

A specialist in Neuroradiology diagnoses and treats disorders of the brain, sinuses, spine, spinal cord, neck, and the central nervous system, such as aging and degenerative diseases, seizure disorders, cancer, stroke, cerebrovascular diseases, and trauma. Imaging commonly used in Neuroradiology includes angiography, myelography, interventional techniques, and MRI. Two additional years - one year of a fellowship and one year of practice or additional approved training - are required.
Nuclear Radiology

A specialist in Nuclear Radiology uses the administration of trace amounts of radioactive substances (radionuclides) to provide images and information for making a diagnosis. Imaging that can involve Nuclear Radiology includes PET (positron emission tomography) and SPECT (single photon emission computed tomography) scans. One additional year of fellowship training is required.

Pediatric Radiology

A specialist in Pediatric Radiology uses imaging and interventional procedures related to the diagnosis, care, and management of congenital abnormalities (those present at birth) and diseases particular to infants and children. A Pediatric Radiologist also treats diseases that begin in childhood and can cause impairments in adulthood. Two additional years - one year of a fellowship and one year of practice or additional approved training - are required.

Vascular and Interventional Radiology

A specialist in Vascular and Interventional Radiology diagnoses and treats diseases with use of various radiologic imaging technologies, including fluoroscopy, digital radiography, CT, sonography, and MRI. Therapies include angioplasty, stent placement, thrombolysis, embolization, biliary, and genitourinary drainages, abscess drainages, and others. Two additional years - one year of a fellowship and one year of practice or additional approved training - are required.

II. Interventional Radiology and Diagnostic Radiology

An Interventional Radiologist combines competence in imaging, image-guided minimally invasive procedures and peri-procedural patient care to diagnose and treat benign and malignant conditions of the thorax (excluding the heart), abdomen, pelvis, and extremities. Therapies include embolization, angioplasty, stent placement, thrombus management, drainage, and ablation, among others. Training includes a minimum of three years of Diagnostic Radiology and two years of Interventional Radiology, leading to primary certification in Interventional Radiology and Diagnostic Radiology.

III. Radiation Oncology

A Radiation Oncologist deals with the study and management of disease, especially malignant tumors, and radiological treatments of abnormal tissue through the use of x-rays or radionuclides. Training required is five years: one year of clinical internship, followed by four years of Radiation Oncology training. Anyone who wishes to specialize in the area listed below must first certify with the American Board of Radiology.

Subspecialty

Hospice and Palliative Medicine

A specialist in Hospice and Palliative Medicine uses special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

IV. Medical Physics

This discipline of Medical Physics includes Diagnostic Medical Physics, Nuclear Medical Physics, and Therapeutic Medical Physics. A Medical Physicist uses physics to aid in the diagnosis and treatment of conditions and deals with the technology of the equipment, including radiation safety. The type of training varies per discipline.

Specific Discipline Areas

A Medical Physicist must specialize in at least one of the following, but may hold certification in two areas or all three.

Diagnostic Medical Physics

A specialist in Diagnostic Medical Physics (1) uses x-rays, gamma rays from sealed sources, ultrasound, and magnetic resonance in diagnostic procedures; (2) maintains the equipment associated with their production and use; and (3) applies standards for the safe use of radiation.

Nuclear Medical Physics

A specialist in Nuclear Medical Physics (1) uses radionuclides (except those used in sealed sources for therapeutic purposes) for diagnosing and treating conditions; (2) maintains the equipment associated with their production and use; and (3) applies standards for the safe use of radiation.

Therapeutic Medical Physics

A specialist in Therapeutic Medical Physics (1) uses x-rays, gamma rays, electron and other charged particle beams, neutrons and radiation from sealed radionuclide sources in the treatment of conditions; (2) maintains the equipment associated with their production and use; and (3) applies standards for the safe use of radiation.

Surgery (General Surgery)
A General Surgeon has principal expertise in the diagnosis and care of patients with diseases and disorders affecting the abdomen, digestive tract, endocrine system, breast, skin, and blood vessels. A General Surgeon is also trained in the treatment of patients who are injured or critically ill, and in the care of pediatric and cancer patients. General Surgeons are skilled in the use of minimally invasive techniques and endoscopies. Common conditions treated by General Surgeons include hernias, gallstones, appendicitis, breast tumors, thyroid disorders, pancreatitis, bowel obstructions, colon inflammation, and colon cancer. Some General Surgeons pursue additional training and specialize in the fields of Pediatric Surgery, Surgical Oncology, Vascular Surgery, Trauma Surgery, Hospice and Palliative Medicine, Transplant Surgery, and others.

Specialty training required prior to certification: Five years
In addition to a general certificate in Surgery (General Surgery), the American Board of Surgery issues a general certificate in the following area of Surgery.

Vascular Surgery
A Vascular Surgeon has expertise in the diagnosis and management of patients with disorders of the arterial, venous, and lymphatic systems, excluding vessels of the brain and the heart. Certified Vascular Surgeons, have significant experience in providing comprehensive care to patients with all types of vascular disease, including diagnosis, medical treatment, and reconstructive vascular surgery and endovascular techniques. Common interventions performed by vascular surgeons include the opening of blocked arteries, repair of veins to improve circulation, treatment of aneurysms (bulges) in the aorta and other blood vessels, and treatment of vascular injuries.

Specialty training required prior to certification: Five to seven years

Subspecialties
To become certified in a particular subspecialty, a physician must be certified by the American Board of Surgery and complete additional training as specified by the board.

Complex General Surgical Oncology
A Surgeon trained in Complex General Surgical Oncology is a General Surgeon who has expertise in the diagnosis, multidisciplinary treatment, and rehabilitation of patients with rare, uncommon, or complex cancers. These surgeons typically work in cancer centers or academic institutions and coordinate patient care with other cancer specialists. They also provide outreach in cancer prevention and education, and lead cancer studies.

Hospice and Palliative Medicine
A Surgeon trained in Hospice and Palliative Medicine has special knowledge and skills to prevent and relieve the suffering experienced by patients with life-limiting illnesses. This specialist works with an interdisciplinary hospice or palliative care team to optimize quality of life while addressing the physical, psychological, social, and spiritual needs of both patient and family.

Pediatric Surgery
A Pediatric Surgeon is a General Surgeon who has expertise in the diagnosis and care of premature and newborn infants, children, and adolescents. This care includes the detection and correction of fetal abnormalities, repair of birth defects, treatment of injuries in children and adolescents, and the treatment of pediatric cancer patients, as well as conditions treated in adults by General Surgeons, such as appendicitis, hernias, acid reflux, and bowel obstructions.

Surgery of the Hand
A Surgeon trained in Surgery of the Hand has expertise in the surgical, medical, and rehabilitative care of patients with diseases, injuries, and disorders affecting the hand, wrist, and forearm. Common conditions treated by a hand surgeon include carpal tunnel syndrome, trigger fingers, ganglia (lumps), sports injuries to the hand and wrist, hand injuries involving fractures, dislocations, and lacerated tendons, nerves and arteries. Hand Surgeons may be General Surgeons, Orthopedic Surgeons or Plastic Surgeons who have received additional training in this area.

Surgical Critical Care
A Surgeon trained in Surgical Critical Care has expertise in the diagnosis, treatment, and support of critically ill and injured patients, particularly trauma victims and patients with serious infections and organ failure. In addition, these surgeons coordinate patient care among the patient’s primary physician, critical care staff, and other specialists.
Thoracic Surgery

Thoracic Surgeons treat diseased or injured organs in the chest, including the esophagus (muscular tube that passes food to the stomach), trachea (windpipe), pleura (membranes that cover and protect the lung), mediastinum (area separating the left and right lungs that contains the heart), chest wall, diaphragm (separates the chest from the abdomen), pericardium (membrane covering the heart), heart (including the pericardium, coronary arteries, valves and myocardium), and lungs. The most common diseases requiring Thoracic Surgery include heart lesions, such as coronary artery disease and valve problems, lung cancer, chest trauma, esophageal cancer, emphysema, and heart and lung transplantation.

Specialty training required prior to certification: Six to eight years

Subspecialty

To become certified in the following subspecialty, a physician must be certified by the American Board of Thoracic Surgery and complete additional training as specified by the board.

Congenital Cardiac Surgery

Congenital Cardiac Surgery refers to the procedures that are performed to repair the many types of heart defects that may be present at birth and can occasionally go undiagnosed into adulthood. These may include patching holes between chambers of the heart, improving blood flow to the lungs, or heart and lung transplantation.

Urology

A Urologist, also known as a Genitourinary Surgeon, focuses on diagnosing and treating disorders of the urinary tracts of males and females, and on the reproductive system of males. These specialists manage non-surgical problems such as urinary tract infections and benign prostatic hyperplasia, as well as surgical problems such as the surgical management of cancers, the correction of congenital abnormalities, and correcting stress incontinence.

Specialty training required prior to certification: Five years

Subspecialty

To become certified in the following subspecialty, a physician must be certified by the American Board of Urology and complete additional training as specified by the board.

Female Pelvic Medicine and Reconstructive Surgery

A subspecialist in Female Pelvic Medicine and Reconstructive Surgery is a physician in Obstetrics and Gynecology or Urology who, by virtue of education and training, is prepared to provide consultation and comprehensive management of women with complex benign pelvic conditions, lower urinary tract disorders, and pelvic floor dysfunction. Comprehensive management includes those diagnostic and therapeutic procedures necessary for the total care of the patient with these conditions and complications resulting from them.

Pediatric Urology

A Pediatric Urologist is trained to diagnose, manage, treat, and prevent urologic disorders in children. Such disorders include undescended testes, congenital abnormalities of the genito-urinary tract, underdeveloped genitalia, and difficulties with urination.
