Meaningful Participation in Part 4 Activities

Virginia A. Moyer, MD, MPH
American Board of Pediatrics
Vice President for MOC and Quality
Evolving Requirements: Until recently:

- Direct or consultative patient care in the project
- Completion of one or more tests of change
- Review own data as part of project
- Attend 4 or more project meetings
- Active for minimum duration (per project plan)
Reasons for change

• QI is a team sport, and essential team members have a variety of roles
• Not all essential team members provide direct patient care or have their “own” data to review
• Meetings are now often virtual or online
• Duration may not be a good reflection of involvement
Current (revised) ABP Criteria

• Be intellectually engaged in planning and executing the project.
• Participate in implementing the project's interventions (the changes designed to improve care).
• Review data in keeping with the project's measurement plan.
• Collaborate actively by attending team meetings.
